FLIGHT TICKETS HELPER

<https://docs.google.com/document/d/1njwEPaXVy2aYxdYZjIHRm8ZcM-e0HongCrN4D0UmLz0/edit>

3/

USER NEEDS

- To check tickets for flights that are within their specified price range and their availability.
- To get notifications for such flights when their price falls in the the specified range
- To save the flights they're interested in / Previously travelled with into collections
- To apply the users filters to these collections

WHY EXISTING SOLUTIONS DON'T WORK

- Users have to re-enter search criteria each time
- Users can't temporarily save the flights they're interested in collections
- Email notifications sent to users may be ignored (plan to change to the voice notification like alarm clock, but user are allowed to turn on/off)
- User cannot apply the filter to a collection of tickets

3/

TASKS

Task 1: Michael is an international student, he wants to

- **book a flight ticket from his hometown -- Beijing, to the location of his university -- Champaign.**
- Take the flight on **August 20th** which is his university's school day and
- due to the limited budget and lots of luggage he needs to take back to school, he wants to buy the ticket which could **take 3 bags within 300 dollars.**

TASKS

Task 3: Kevin is a businessman, he will go from **Boston to New York** to attend a meeting, and **then go to Seattle** to meet with customers. In order to ensure the continuity of the trip, he must **book two tickets at the same time**. There are several potential tickets he could buy for the two trips. He hopes to receive information in time when the total price of the tickets for the two trips is **less than 1000 dollars** which can be reimbursed by the company.
